eQ Technologic

eQ Technologic, Inc. ('eQ') is now a ISO-27001 certified Company

Date: October 9th, 2015

Today, eQ announced it has received the ISO 27001–2013 certification for its US and India operations. ISO/IEC 27001 is the best–known standard providing requirements for an Information Security Management System (ISMS). ISMS provides a systematic approach to manage sensitive company information so that it remains secure. It helps manage information about people, processes and IT systems by applying risk management processes. Using this family of standards helps an organization manage the security of assets such as financial information, intellectual property, employee details or information entrusted to it by third parties.

"*This is a great achievement for eQ as it provides a stamp of approval for our people, processes and IT systems in keeping information secure at eQ. Being an enterprise software company, we value our intellectual property highly. All information related to our IP, financial information, other company sensitive information, our processes, and customer project information is covered under this certification.*

Although, no customer has specifically asked eQ to be ISO–27001 certified, in 2013 we decided that it is strategically the right thing to do for our Company. Given, the information breaches that are making headlines frequently, I believe within the next couple of years, having an ISO–27001 certification will become mandatory for any enterprise software company doing business with Customers across industries." – said Dinesh Khaladkar, President & CEO, eQ Technologic.

About eQ Technologic:

eQ Technologic, Inc. ('eQ') is a trusted provider of comprehensive software solutions for enterprise-wide visibility and for enterprise application integration, synchronization, and migration. eQube®, our platform for enterprise information infrastructure establishes a Digital Backbone of integrated applications and provides enterprise-wide visibility leading to Actionable Insight and knowledge. This platform is flexible, robust, scalable, and secure with overall lower total cost of ownership. eQube offerings in the market are: eQube-BI for enterprise-wide Business Intelligence and eQube-MI for application migration, synchronization, and integration.

eQ Technologic, Inc.

Additionally, eQube-TM and eQube-DP provide core capabilities for rule-based transformations between disparate systems in support of application migration / integration, 'cube' migration, and for data quality assessment, correction / repair.
